

Installation Instructions for TaxWare

For versions 2.22 and later (november 2019)

Last changes: 09/07/2020

Installation INSTRUCTIONS TaxWare

Initial installation

- Check the system requirements: [«Technical Requirements TaxWare.pdf»](#)
- Make sure that Microsoft .NET Framework 4.7.2 is installed on your system.
- Use the installation file <https://update.taxware.ch/Installer/TaxWareSetup.exe>
- If you need an msi, e.g. for integration in GPO, download the desired version:
 - for 64bit systems: <https://update.taxware.ch/Installer/TaxWareSetupX64.msi>
 - for 32bit systems: <https://update.taxware.ch/Installer/TaxWareSetupX86.msi>
- Execute the file under a user account with administrator rights.
- You will find the command line arguments for the exe and file under <https://www.advancedinstaller.com/user-guide/msiexec.html>

Configuration with installation file

Licenses

Standard procedure is for each user to activate TaxWare using a license key. To avoid every user on a Terminal Server having to do this, the key can be filed in the Installation Directory.

Automatic software updates

To deny users access to automatic software updates these can be disabled.

NB: To receive notifications about software updates anyway, contact us at support@taxware.ch

Installation with command line arguments

You will find the command line arguments for the exe and msi files by clicking on:
<https://www.advancedinstaller.com/user-guide/msiexec.html>

The installation file can be started with the following TaxWare parameters via the command line:

Transfer parameter	Value	Description
P_DISABLEPROGRAMUPDATE	0 or 1	1 disables application updates
P_LICENSEKEY	GUID	License key
P_BYPASSPROXY	0 or 1	1: bypass web proxy
P_USEDEFAULTCREDENTIALS	0 or 1	1: use standard logon credentials for web proxy
P_WITHADVANCEDSETTINGS	0 or 1	Display advanced settings during installation procedure although OS is not server
P_SHAREDSETTINGSFULLPATH	path	Path to shared settings file
P_CEPE	0 or 1	0 to disable customer experience program

Standard example „execute exe silent“:

- TaxWareSetup.exe /qn P_LICENSEKEY=00000000-0000-0000-0000-000000000000
P_DISABLEPROGRAMUPDATE=1

Advanced example „execute exe silent“

- TaxWareSetup.exe /qn P_LICENSEKEY=00000000-0000-0000-0000-000000000000
P_DISABLEPROGRAMUPDATE=1 P_BYPASSPROXY=0 P_USEDEFAULTCREDENTIALS=0

Manual configuration

Licenses

Standard procedure is for each user to activate TaxWare using a license key. To avoid every user on a Terminal Server having to do this, the key can be filed in the Installation Directory.

- Create a text file „TaxKey.taxk“ in the Installation Directory
- Copy the issued license key (Format 00000000-0000-0000-0000-000000000000) into this file and start TaxWare

Automatic software updates

To deny users access to automatic software updates these can be disabled.

- Open file „TaxWare.exe.customer.config“ from the %InstallationDirectory% using a text/xml editor
- Change the option „AllowCheckForApplicationUpdates“ from true to false
- Change the option „CheckForApplicationUpdatesApplicationSetting“ from true to false

NB: To receive notifications about software updates anyway, contact us at support@taxware.ch

Excel add-in TaxAnalyzer

The TaxWare setup only registers the Excel add-in TaxAnalyzer for the current user. TaxAnalyzer can be registered and deregistered via Logon Script:

- %InstallationDirectory%\TaxWare.TaxAnalyzer.Registration.exe
- %InstallationDirectory%\TaxWare.TaxAnalyzer.Registration.exe /unregister

Web proxy settings

During connection build-up to the licensing server, problems with the web proxy can occur.

The most common solution is to bypass the web proxy.

- Open file „TaxWare.exe.customer.config“ from the %InstallationDirectory% using a text/xml editor
- Enter the option „http://taxservices.fiveinfo.ch“ in „NoWebProxyForUris“

If the web proxy cannot be bypassed, it may be possible to solve the problem via the authentication.

- Open file „TaxWare.exe.customer.config“ from the %InstallationDirectory% using a text/xml editor
- Enter the option „true“ in „UseWebProxyDefaultCredentials“

Shared settings

Most user configuration properties can be defined company wide. A detailed instruction can be found here: <https://www.taxware.ch/de/support/installationsanleitung/dokumentation-shared-settings.html>

Customer experience program

TaxWare is sending anonymous user actions and error messages to FIVE Informatik AG. Should this feature be disabled you can add a key "CustomerExperienceProgramEnabled" with value false to the file TaxWare.exe.customer.config.

Overview of TaxWare system structure
